**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 1-22, drawn to a broadband Internet node in which received packets are classified/identified for routing, classified in class 370, subclass 392.
  - II. Claim 23-35, drawn to a method for monitoring network traffic and data flow, classified in class 370, subclass 230.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated, separate, distinct and independent. Neither requires other for its implementation, they have separate statues in the art as shown in by their different classification. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). Each invention, if allowable, would be capable of supporting a separate patent.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
